

# Retica Technologies

Transforming resource access and identity authentication

Retica pitch deck

April 2025

<https://www.retica.io>

# Problem: Digital exhaust

Passwords, PINs, and single biometrics are outdated and breach-prone.

MFA/2FA increases friction without solving core security issues.

Other resource access solutions outdated (e.g., QR codes)

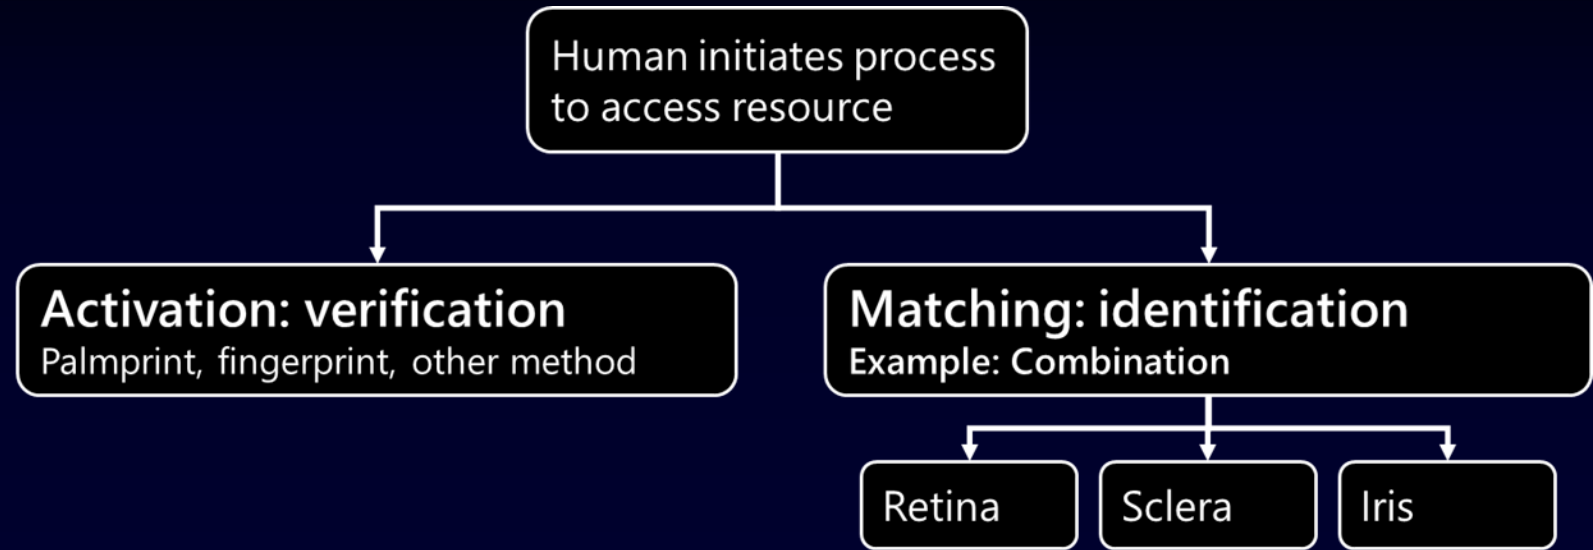

Authentication complexity reduces productivity, degrades wellbeing, and increases trust requirements.

# Solution: Activation-match

## Activation-match

A revolutionary multi-modal biometric resource access and identity authentication system.

- Seamless identity authentication with *multi-modal* biometrics.
- Authentication requires **local verification** and **cloud-based identification** processes.
- No PII in cloud. Privacy by design.
- Mathematically superior security.

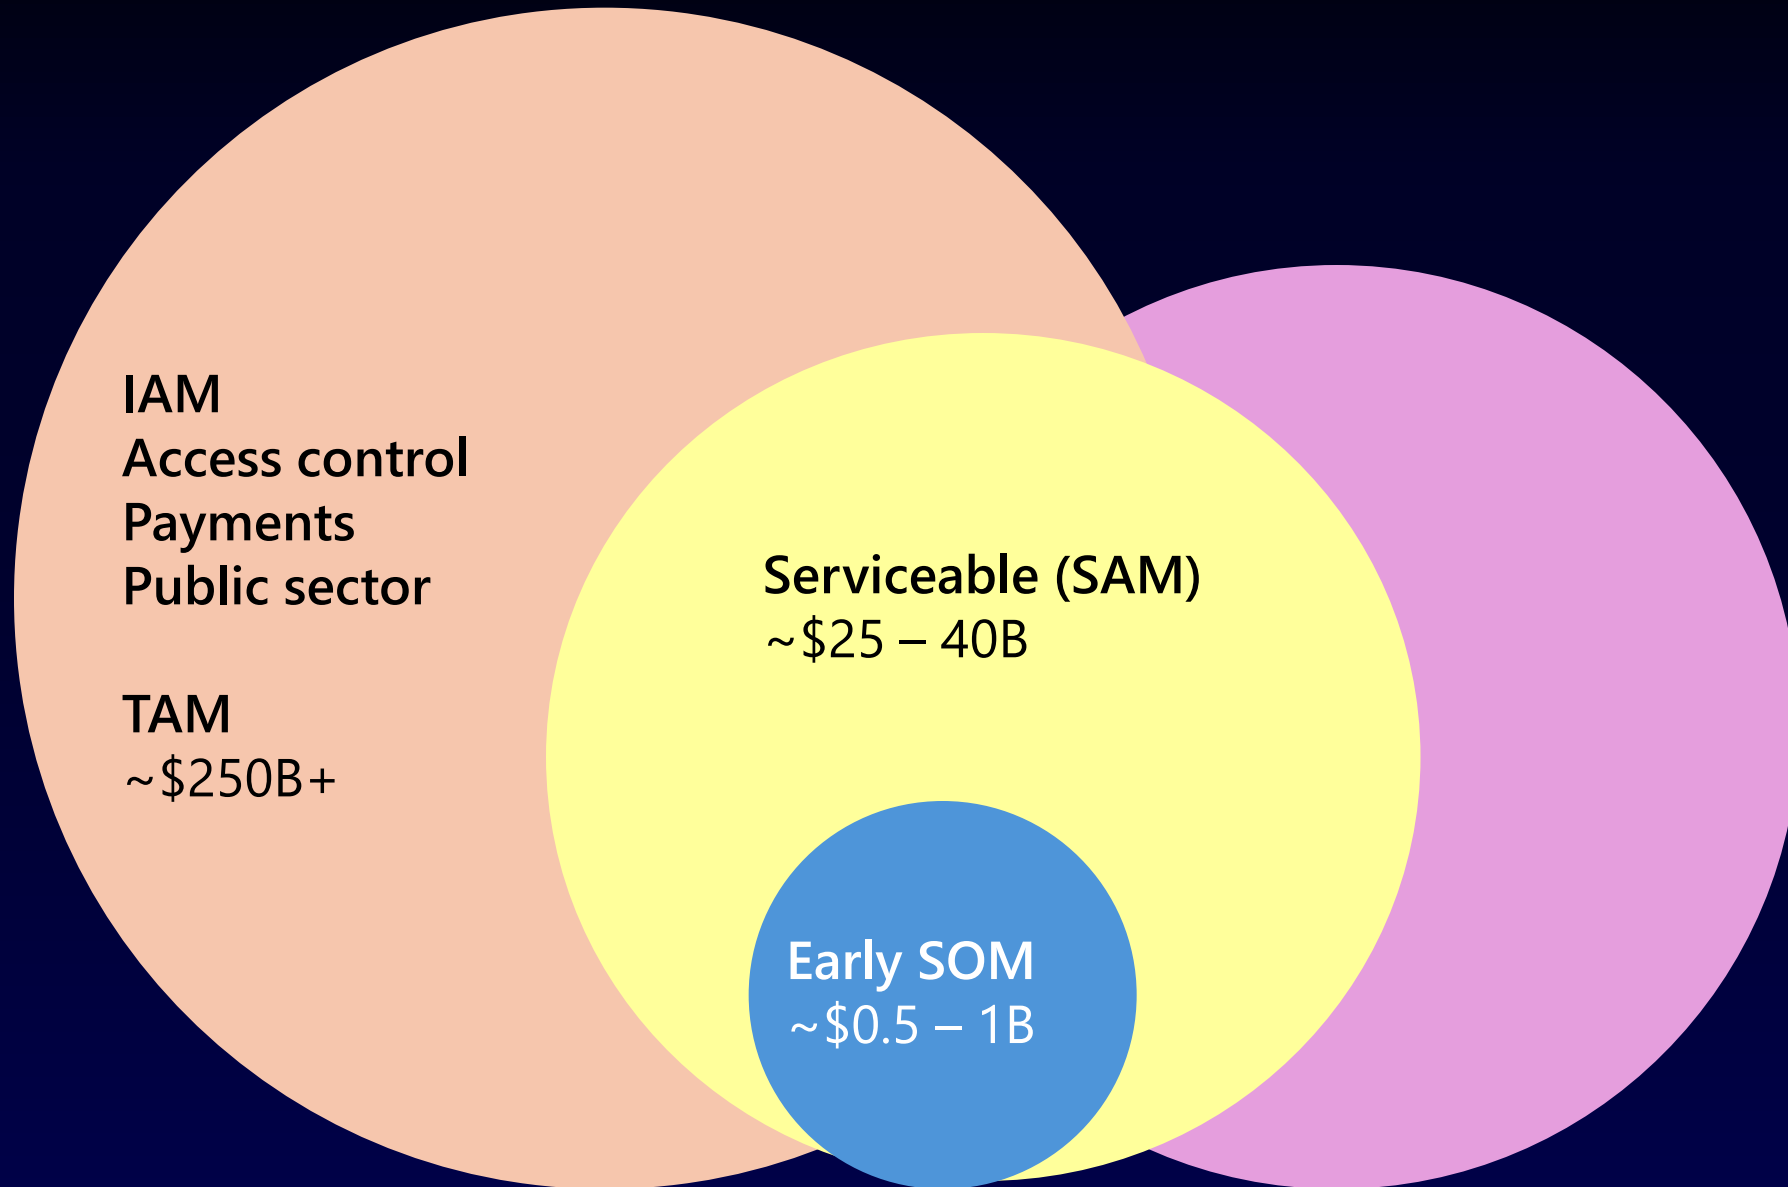

# Technology advantage

- **Local activator:**  
Fingerprint/palmprint verification (device-stored).
- **Cloud matcher:** Retina, sclera, iris identification (global templates).
- **Zero knowledge distributed architecture:** No PII in cloud, randomized code chains using non-predefined code.
- **Zero trust:** No single point of failure.

# Market opportunity

# Business model

Marketing reflects potential, not actual, partnerships

B2B and B2G, API/SaaS licensing

Hardware/software integrations with major platforms

Strategic partnerships and pilots

Subscription-based and transaction-aligned revenue streams

- Value-based revenue streams

Marketing reflects potential, not actual, partnerships

# Go-to-market strategy

- Government and public sector pilots (TSA, DHS focus)
- Strategic partnerships: device makers, financial services, infrastructure
- Direct enterprise sales
- Industry conference demos (security at entrance) and early adoption programs

## Potential partnerships and customers

# Competitive landscape

- Traditional identity management
- Single-biometric and 2FA/MFA
- Limited biometric integration

- Local verification only
- Information bias in templates
- Single point of failure

- Passkey-based authentication
- Limited to device ecosystems or specific apps/sites
- Single point of local failure

- Multi-modal biometric solution
- Independent, simultaneous processes
- No PII in the cloud
- Local data secured by activation-match

## Our difference

Mathematically superior security organically interested in driving unmatched human experience

# Financial projections

- Scenario: Partner with **largest** smartphone maker
- Phone maker sells **200M** phone units/year; Retica captures **\$10/unit in revenue**.
- Projected revenue: **\$2B**

## Margin assumptions

- COGS *35% sales*
- SG&A *20% sales*
- R&D and licensing *25% sales*
- D&A *5% sales*

## Financial statement outputs

- Sales \$2 billion
- Gross income \$1.4 billion
- EBITDA \$500 million
- EBIT \$400 million

Only-positive EBITDA public companies in “software” sub-verticals implies enterprise values of **\$11B – 18B**.

# Funding ask

- Raising \$1M at \$5M, pre-money valuation
- Use of funds:
  - Development of government/military-grade applications/CRADA
  - TSA Passenger Identity Verification opportunity
  - Strategic integrations and pilots

# Team

Jonathan Newman, CEO and cofounder  
Josh Woolf, Business Development/Sales and cofounder  
Ganesh Kudtarkar, Engineering

Supported by experienced advisors in tech, government, finance, and medicine.

## Our team

- Experienced and intentional
- Cybersecurity, corporate, and government backgrounds
- Mission- and impact-driven

# Closing

Thank you.

Join us in transforming security and human experience.

We hope you enjoy the ride as much as we do.
